## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 and 10-17 of U.S. Patent No. 6, 745,373. Independent claims 1, 6 and 13 are similar to claim 1 in the reference respectively because they recite various scope of invention. Claims 1, 6 and 13 in application disclose a method of inserting a test point into a circuit design that includes replacing a driver cell of a selected node by a replacement cell having the same function and a test point function as the driver cell, but claim 1 in the reference recites disclose a method of inserting a test point into a circuit design that includes replacing a driver cell of a selected node by a replacement cell having the same function and a test point function as the driver cell, wherein selected replacement cell has a smallest power requirement of all potential replacement cells.

Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to a person of ordinary skills in the art to use the method of inserting a test point into a circuit design that includes replacing a driver cell of a selected node by a replacement cell having the same function and a test point function as the driver cell for implementing it in the method described in U.S. Patent No. 6, 745,373.

For example, it would have been obvious to implement the method that includes:

A method of inserting a test point into a circuit design, comprising:  
selecting a node in said circuit design;  
determining a driver cell of said node;  
selecting from a file a replacement cell for said driver cell, said replacement cell having the same function of said driver cell and a test point function;  
replacing said driver cell with said replacement cell .
